

Lesson 3 : SHARP Searches

Scenario

In the previous lesson, you learned the menu layout of SHARP. In this lesson, the SHARP trainer, Hall, will show the newly hired Payroll Processor, Kelly, some common buttons in SHARP and explain how to perform basic and advanced searches.

Hall

Kelly

Lesson 3 : SHARP Searches

Lesson Objective

After completing this lesson, you will be able to:

- Describe common buttons used in SHARP
- Do a basic search
- Do an advanced search
- Save search criteria
- Use operators in search criteria
- Use wildcards in search criteria
- Use the find feature

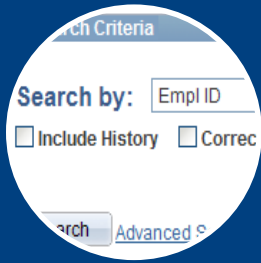

Lesson 3 : SHARP Searches

Lesson Topics

In this lesson you will learn about the following topics. Click **Home** (at the lower left corner) at any time to return to this menu. Click each topic to navigate to that topic.

Topic 1:
Common
Buttons

Topic 2:
Basic Search

Topic 3:
Advanced
Search

Topic 4:
Saving
Search
Criteria

Topic 5:
Operators &
Wildcards

Lesson 3 : SHARP Searches

Common Buttons

Buttons in SHARP have names that make it easy to understand what they do. For example, the **Search** button launches a search.

Frequently used buttons fall into two groups:

- Buttons used to search and review
- Buttons used when adding data

Lesson 3 : SHARP Searches

❑ Search and Review Buttons

Starts a search

Clears text from all fields on the **Search** page so that you can enter new criteria

Returns you to the **Search** page

Displays the next record from the search results (unless you are on the last record)

Displays the previous record from the search results (unless you are on the first record)

Lesson 3 : SHARP Searches

□ Data Entry Buttons

Sends the information that you enter on the page to the database

Accepts the data you enter and returns you to the page where you accessed the current page

Clears the page and any data that you enter or change. Use the **Cancel** button if you enter data incorrectly and want to begin again.

Lesson 3 : SHARP Searches

□ SHARP Is A Relational Database

A	B	C	D	E	F

Relational databases store data in tables

A	B	C	D	E	F

Tables are made of rows and columns, similar to a spreadsheet

A	B	C	D	E	F

Each column is a field and each row is a separate data record, for example, an effective dated row.

A	B	C	D	E	F

You can easily retrieve information from tables in SHARP using search fields

Lesson 3 : SHARP Searches

Basic Search

Update Employee Tax Data

Enter any information you have and click Search. Leave fields blank for a list of all values.

Find an Existing Value

Limit the number of results to (up to 300):

Search by: begins with

☐ Include History ☐ Correct History

[Advanced Search](#)

You can determine the number of search results to return by changing the number here.

Basic search provides only one search field. Use the drop down to change the field used to search.

Lesson 3 : SHARP Searches

Advanced Search

Update Employee Tax Data

Enter any information you have and click Search. Leave fields blank for a list of all values.

Find an Existing Value

Limit the number of results to (up to 300):

Empl ID:	<input type="text" value="begins with"/>	<input type="text"/>
Company:	<input type="text" value="begins with"/>	<input type="text"/>
Name:	<input type="text" value="begins with"/>	<input type="text"/>
Last Name:	<input type="text" value="begins with"/>	<input type="text"/>
Second Last Name:	<input type="text" value="begins with"/>	<input type="text"/>
Alternate Character Name:	<input type="text" value="begins with"/>	<input type="text"/>

☐ Include History ☐ Correct History

[Basic Search](#)

[Save Search Criteria](#)

Advanced search allows you to use a combination of search fields to limit the number of results. The more criteria you enter, the more you narrow your results.

The fields available for an advanced search are unique to each component.

Lesson 3 : SHARP Searches

□ Saving Search Criteria - 1

Update Employee Tax Data

Enter any information you have and click Search. Leave fields blank for a list of all values.

Find an Existing Value

Limit the number of results to (up to 300):

Empl ID:	begins with ▼	<input type="text"/>
Company:	begins with ▼	<input type="text"/>
Name:	begins with ▼	<input type="text"/>
Last Name:	begins with ▼	<input type="text"/>
Second Last Name:	begins with ▼	<input type="text"/>
Alternate Character Name:	begins with ▼	<input type="text"/>

☐ Include History ☐ Correct History

[Basic Search](#)
[Save Search Criteria](#)

If you tend to use the same criteria every time you look for information in a component, you can speed things up by saving your search criteria.

Click the **Save Search Criteria** link to save common searches.

Lesson 3 : SHARP Searches

□ Saving Search Criteria - 2

Update Employee Tax Data

Save Search As

Name the search and then click Save

Name of Search:

The saved search will contain these values:

Empl ID:	begins with
Company:	begins with SOK
Name:	begins with
Last Name:	begins with
Second Last Name:	begins with
Alternate Character Name:	begins with

Save

[Return to Advanced Search](#)

The **Save Search As** page shows the criteria you are about to save.

Enter a name for your search and then click the **Save** button.

Lesson 3 : SHARP Searches

□ Saving Search Criteria - 3

Update Employee Tax Data

Enter any information you have and click Search. Leave fields blank for a list of all values.

Find an Existing Value

Limit the number of results to (up to 300): 300

Use Saved Search: SOK Search ▼

Empl ID:	begins with ▼	
Company:	begins with ▼	SOK
Name:	begins with ▼	
Last Name:	begins with ▼	
Second Last Name:	begins with ▼	
Alternate Character Name:	begins with ▼	

☐ Include History ☐ Correct History

Search Clear Basic Search Save Search Criteria Delete Saved Search

Once you save a search, the **Use Saved Search** box displays at the top of the page.

Use the **Delete Saved Search** link to remove searches you no longer need.

Lesson 3 : SHARP Searches

Operators and Wildcards

Search Criteria

Empl ID	begins with	
Company	begins with	
Name	contains	
Last Name	=	
Second Last Name	not =	
Alternate Character Name	<	
	<=	
	>	
	>=	
	between	
	in	

☐ Include History ☐ Co

[Search](#) [Clear](#) [Basic Search](#) [Save Search Criteria](#)

Operators are used to narrow search results. By default, when you enter criteria in a search field, all rows of data that begins with that criteria are returned.

TIP: If your search comes back “No Results Found,” take out some of your search criteria to expand your results.

Wildcards are characters that substitute for other characters in search criteria. Use a percent sign (%) in your search criteria to replace one or more characters if you are unsure of the exact value in the record you are trying to find.

Lesson 3 : SHARP Searches

Lesson Checkpoint

Now is your opportunity to ensure that you are learning the lesson material. After you read the question, make your selection, then compare your response to the correct answer provided at the bottom of the page.

Lesson 3 : SHARP Searches

Lesson Checkpoint

The _____ button removes text from all fields on the search page so that you can enter new criteria.

- A. Clear
- B. OK
- C. Save
- D. Search

The correct answer is A – The Clear button clears text from all fields on the search page so that you can enter new criteria.

Lesson 3 : SHARP Searches

Lesson Checkpoint

What is the wildcard used to replace one or more characters in your search criteria if you are unsure of the exact value in the record you are trying to find.

- A. ?
- B. F1
- C. %
- D. *

The correct answer is C – The percent sign is the wildcard that can be used to replace one or more characters in SHARP searches.

Lesson 3 : SHARP Searches

Lesson Summary

Common buttons in SHARP are used for two purposes: 1) To search and review data and 2) To conduct data entry

SHARP provides both a Basic Search page and an Advanced Search page. The Advanced Search page provides more options for limiting search results.

Saving your search saves time if you tend to use the same criteria to search within a component

Operators and wildcards are used to enhance your search capabilities

The find feature is helpful when looking through large numbers of search results

In this lesson, I defined some common buttons in SHARP and explained how to perform searches. Listed on the left are some key concepts.

Lesson 3 : SHARP Searches

Lesson Completion

Congratulations! You have finished this lesson.

If you have another lesson to take, go back to the 9.2 Training Resources page to select the next lesson you want to take.
